

UCX Group — Website Customization Summary

Every bespoke interaction and animation built into the site, page by page — beyond a standard template.

This is a plain-language walkthrough of the custom work built into the site — not stock theme behavior, but things specifically designed and built for UCX: scroll-driven animations, custom cursors, interactive diagrams, gated lead forms, and more. Each item names the page(s) it appears on so it's easy to find and demo.

GLOBAL — EVERY PAGE

- **Spinning "X" mark in the nav.** The Collaboration Lab icon in the header continuously rotates as you scroll the page — the rotation speed is tied directly to scroll position, not a fixed animation loop.
- **Collapsing header on scroll.** The header compacts and tightens once you scroll past the top of the page, then expands back when you scroll to the top.
- **Mega-menu navigation.** Hovering (or tapping, on mobile) each nav item opens a full-width panel with grouped links, a featured promo tile, and a distinct look for the Design & Interiors sub-brand.
- **Command-palette search (Ctrl/⌘ + K).** A Spotlight-style search overlay with live ranked results across every page, insight, resource, case study and team member — fully keyboard-navigable.
- **Rotating footer badge.** The circular "Design · Digital · Delivery · Asset" emblem in the footer has its text running along a curved path that spins continuously.
- **Copy-to-clipboard email.** Clicking the contact email anywhere on the site copies it and shows a brief "Copied" confirmation.
- **Back-to-top button.** Appears only after scrolling ~480px, with a smooth animated scroll back to the top.
- **"Come back!" browser tab title.** Switching away from the site's browser tab changes the tab title to a friendly nudge, reverting when you return.
- **Custom loading screen.** The very first thing a visitor sees is a small animated Tetris game running behind the "Loading..." text — a playful, on-brand touch instead of a generic spinner.
- **Magnetic buttons.** Primary call-to-action buttons subtly pull toward the cursor as you hover near them and spring back when you move away — used on the homepage, capability pages, training page and contact form.
- **Cursor-follow spotlight.** A soft glow that tracks the mouse in the background — a recurring signature effect used across roughly twenty different sections site-wide, not a one-off.
- **Staggered reveal-on-scroll.** Nearly every section on every page fades and slides its content into view piece by piece as you scroll to it, rather than just appearing instantly.

HOMEPAGE

- **Hero radar dial.** A rotating radar-style dial cycles through 6 project stages (Concept → Handover); a sweep line auto-highlights each one, and moving your mouse over the dial "locks on" to the nearest stage with a live pointer line and label.
- **Live studio clock.** Shows the current time in Coimbatore (India), ticking in real time in the hero's top bar next to GPS-style coordinates.
- **Rotating headline.** "Designed. / Connected. / Delivered." cycles automatically in the hero with a smooth crossfade — and pauses if you scroll it off-screen or switch tabs, so it's not wasting motion when no one's looking.
- **Scrolling capability ticker.** An infinite marquee of capability names runs along the bottom of the hero.
- **Pinned scroll-through story — "One Connected Delivery Ecosystem".** An Apple-style section: scrolling pins the section in place and slides horizontally through an intro panel plus four "intelligence pillar" panels, with a live progress rail at the bottom tracking which one you're on.
- **Interactive services list.** Hovering a row in "What We Deliver" glides a floating preview image up or down to match the row you're on.

- **Auto-scrolling specialist solutions carousel.** A continuously moving card strip showcasing specialist workflows.
- **Fanned project gallery.** Featured projects display as a hand of cards, fanned out; hovering a card lifts it and the neighboring cards make room, with arrow and dot navigation.
- **3D flip cards.** Sector/stakeholder tiles flip over on hover to reveal extra detail on the back.
- **Animated world map.** Glowing flight-path lines animate from Coimbatore to five global regions, with pulsing arrival markers, a moving dot that travels each path, and hover tooltips — paired with a spinning compass graphic.
- **Auto-advancing "Why UCX".** A list of five reasons to choose UCX rotates automatically every few seconds with a progress bar per item, pausing whenever you hover or focus one.
- **Interactive orbit diagram.** Rings spin at different speeds around a central mark with four hoverable nodes; hovering a node highlights its matching label at the same time.
- **Dynamic contact routing.** Choosing "BIM / Interiors / Training" on the homepage enquiry form reshapes the fields and routing message live.
- **Departure-board testimonials.** Client testimonials scroll vertically like an airport arrivals board, complete with glossy 3D avatar spheres and letter-by-letter text reveal, auto-advancing and pausable on hover.
- **Coin-flip FAQ.** Each FAQ's toggle icon does a 3D coin-flip animation when you open it.

CAPABILITIES PAGES — CAPABILITIES HUB, BIM & DIGITAL DELIVERY, PROJECT & CONSTRUCTION SUPPORT, ASSET & DIGITAL INFORMATION, SPECIALIST SOLUTIONS

- **Animated framework diagram.** An orbiting, pulsing SVG motif on the Capabilities hub's hero, with pulses traveling toward a central "UCX" hub.
- **Scroll-spy side navigation.** A fixed rail of dots tracks which section you're currently viewing and jumps straight there on click.
- **Expand-on-hover capability tiles.** Cards reveal a hidden panel of extra detail and a call-to-action on hover.
- **Marquee process band.** A looping "Concept → Design → Deliver" ticker anchored to the bottom of each page's hero banner.
- **Tabbed capability explorer.** Click-to-switch tabs swap between full descriptions and images without leaving the page.

DESIGN & INTERIORS (SPAYCEX BY UCX SUB-BRAND)

- **Pinned scroll-through hero video.** The hero video sticks in place as you scroll and expands progressively, then releases into normal scrolling — the same "pinned" technique as the homepage ecosystem section.
- **Spinning wordmark ring.** A ring of "SPAYCEX · DESIGN & INTERIORS" text rotates continuously around a pulsing core mark in the hero.
- **Before/after drag slider.** A draggable handle wipes between "before" and "after" photos of a featured fit-out — works on both mouse and touch.
- **Animated process timeline.** The connector line between each process step draws itself in as it scrolls into view.
- **Material swatch light sweep.** Material/finish tiles get a moving light-beam effect on hover.
- **Curtain-reveal footer.** A giant "SPAYCEX" wordmark scales and fades in as you scroll into the footer, like a curtain lifting, with its own scrolling tagline ticker.
- **Dedicated sub-brand chrome.** The header, footer, WhatsApp button and back-to-top button all automatically re-skin — different logo, a distinct "metal" contact button, and a mint accent color — whenever you're on this page or viewing an interiors project.

EXPERIENCE / DIGITAL PROJECT EXPERIENCE

- **Animated stat counters.** Numbers like "30+ Projects Delivered" count up from zero the moment they scroll into view.
- **Expand-on-hover area cards** that cross-link to filtered project views.

- **Cursor-tracking project card glow.** Project cards throughout the Featured Projects and Digital Project Experience sections have a highlight that follows your cursor precisely, plus a "View" label that appears right at the pointer.
- **Live category filtering** with an animated re-entry of the project grid whenever a filter is changed.

COLLABORATION LAB

- **Interactive pointer-reactive network diagram.** A web of connected nodes lights up and draws a live line to your cursor as you move near it.
- **Word-by-word title reveal** on page load.
- **Explore/Ideas toggle.** An animated switch cross-fades between "Where We Explore" and a live "Ideas in the Lab" board with status badges.
- **"Submit a Challenge" modal** — a focus-trapped popup form that feeds straight into the dashboard's enquiries inbox.

PROJECTS, CASE STUDIES & RESOURCES

- **Gated PDF downloads.** Clicking "Download" opens a short lead-capture form; submitting unlocks the actual file.
- **3D tilt location card.** The studio-address card on the Contact page tilts in 3D toward your cursor, and clicking it expands into an animated map schematic where the roads and buildings draw themselves in.

TEAM

- **Flip-reveal founder cards.** Hovering a founder's photo flips it over to reveal their bio and focus areas.

INSIGHTS / BLOG

- **Hover reveal on article thumbnails** — a "Read Article" veil appears over the image on hover.
- **Time-gated reading prompt.** After about 20 seconds of reading an article, a "Still reading? Let's talk about your project" popup slides in — shown once per visit, not repeatedly.
- **Share-link copy + LinkedIn share button** on every article.

CONTACT

- **Dynamic query-based form.** Choosing "BIM / Interior / Training academy" reshapes the form's fields and messaging live.
- **Mini booking calendar.** A small calendar highlights available days and opens the real Calendly booking popup on click — completed bookings are automatically captured into the same enquiries inbox as every other form.
- **3D tilt map card** (shared with the studio-address widget above).

TRAINING & WORKSHOP / CAREERS

- **Filterable program cards** with animated re-entry when switching categories.
- **"Apply Now" modal.** A focus-trapped application form with resume upload, linked directly into the enquiry record.

GLOBAL DELIVERY

- The same animated world map / flight-path visualization as the homepage, paired with a staggered step-by-step "Connect → Coordinate → Deliver" animation.

CLIENT DASHBOARD (PRIVATE ADMIN AREA)

- **Overview page** with live counts across posts, projects, case studies, resources and open roles — unread enquiries are called out.
- **Centralized enquiries inbox.** Every form on the site — contact, careers, case-study/resource downloads, training, homepage enquiries, Collaboration Lab challenges, and Calendly bookings — lands in one place, with search, filters, a New/Contacted/Closed status workflow, and bulk actions.
- **Blog post manager** with Published/Draft/Scheduled states, search, category filters and bulk publish/draft actions.
- The same manage-and-bulk-action pattern for **Projects, Case Studies, Resources and Careers listings.**
- **Careers applications** arrive with the applicant's uploaded resume linked directly in the record.
- **Self-service password change** for dashboard login.

BUILT BUT NOT YET PLACED ON A LIVE PAGE

- **Auto-rotating 3D model viewer.** A drag-to-orbit 3D model component exists and works — ready to showcase an actual project model whenever one is available.
- **Auto-scrolling capability carousel with modal detail view** — built and functional, available for a future page that needs it.

Prepared from the live UCX Group codebase. This list covers custom-built interactions and animations — it does not include standard content, copy or SEO work.
